Reusable

# Application Report

<b>Industry</b>	Aeronautical - Aviation
<b>Type of Application</b>	Protection for long term storage of airplane wing / components stamping tools
<b>Project Details</b>	Stamping tools for up to 3 years storage
<b>Previous Problems</b>	Needed one application of technology that would last duration of storage
<b>Revised Packaging Solution</b>	Tools were wrapped in 8-mil Intercept™ Shrink Film with appropriate desiccants being added.
<b>Benefits and Improvement</b>	The use of Intercept Film allowed for long term storage without the need to rewrap the tools on a bi-annual basis. This allowed for easy storage of the tools, inside or outside. The addition of a zipper access door would allow for easy reviewing during storage (with re-application of fresh desiccants with every opening and inspection process). The tools can be easily retrieved and put into use when needed, with no additional de-greasing, de-oiling, de-rusting or preparation work required.
