Intercept® Shrink Film

NOV 529 Facility August 25, 2012

One Material, 3-way Protection

Anti-Corrosion Protection

Intercept guards against rust, tarnish, oxidation on all materials: ferrous and non-ferrous metals, plastic, rubber, ceramics, textiles, optics, and more.

ESD Protection

Sensitive electronics and circuitry can be damaged by ESD. Only Intercept packaging protects these complex components effectively.

Mold and Mildew Barrier

Mold and mildew can grow in any enclosed humid environments, then secrete corrosive sulfur compounds. Copper is a well known mold/mildew inhibitor.

The copper bonded into Intercept suppresses the growth of mold/mildew, critical for storage/shipment in environments where humidity levels fluctuate.

This unique protection was a key part for Intel's approval.

Intercept Technology™

...Simply Better Protection

Simply Better Protection

- Long Lasting Corrosion Protection
- Chemical-free, Contaminate-free
- Recyclable and Re-usable

**Better for Equipment • Better for Personnel • Better for The Planet
Better for The Bottom Line**
